Introduction:

The Ladki Bahin Scheme was introduced to promote financial inclusion and empower women by encouraging systematic savings. In urban areas of Nagpur City, where economic aspirations and personal hobbies are diversifying, the ability of this scheme to help women save for non-essential but personally significant goals is of growing interest. This paper aims to evaluate how effectively the scheme supports beneficiaries in achieving savings for personal hobbies such as travel, skill development, fitness activities, and gold jewelry purchases.

Background:

India has witnessed a surge in financial inclusion initiatives targeting women to enhance their economic independence. The Ladki Bahin Scheme is one such program designed to provide a secure savings option with additional benefits. Despite its widespread adoption, limited research exists on how the scheme influences the ability of beneficiaries to save for personal aspirations beyond essential needs. This study addresses this gap by focusing on the urban context of Nagpur City, examining how the scheme affects saving habits for personal hobbies.

Objectives:

The primary objectives of this study are:

1. To assess the effectiveness of the Ladki Bahin Scheme in helping beneficiaries save for personal hobbies.

2. To identify the most common hobbies for which beneficiaries save, such as travel, skill development, fitness activities, and gold jewelry.

3. To analyze the challenges faced by beneficiaries in achieving their savings goals.

4. To recommend measures for enhancing the scheme's effectiveness in promoting savings for personal interests.

Hypothesis:

H0: The Ladki Bahin Scheme does not significantly influence the ability of beneficiaries to save for personal hobbies.

H1: The Ladki Bahin Scheme significantly influences the ability of beneficiaries to save for personal hobbies.

Scope:

The scope of this study is limited to:

1. Location– Urban areas of Nagpur City.
2. Beneficiaries – Women recipients of the Ladki Bahin Scheme.
3. Focus – Analyzing savings for personal hobbies like travel, skill development, fitness, and gold jewelry.

Literature Review:

1.Savings Behavior and Welfare Schemes

Government welfare schemes significantly impact the savings behavior of beneficiaries by providing financial support and incentives. Previous research indicates that such programs:

- Encourage formal savings, as cash transfers and subsidies increase disposable income, enabling beneficiaries to save in formal financial institutions (Dupas & Robinson, 2013).

- Promote goal-oriented savings, with targeted schemes often influencing beneficiaries to allocate funds towards specific objectives, such as education, health, or personal interests (Ashraf et al., 2006).

- Enhance financial literacy, as participation in welfare programs is linked to improved knowledge of savings options and financial management practices (Cole et al., 2011).

- Strengthen economic resilience, by fostering a culture of savings that helps beneficiaries manage financial shocks and invest in long-term aspirations (Zimmerman & Banerjee, 2009).

2. Impact of Welfare Schemes on Women's Financial Independence

Welfare schemes targeting women have been shown to significantly influence their financial autonomy and savings behavior. Studies suggest that such initiatives:

- Empower women economically by providing direct financial benefits that increase their control over household income and savings (Kabeer, 2005).

- Influence savings priorities, with women beneficiaries often directing savings towards children's education, health, and personal aspirations (Anderson & Baland, 2002).

- Encourage participation in savings groups, enhancing peer support and financial discipline (Swain & Wallentin, 2009).

- Reduce financial dependency, enabling women to pursue personal hobbies and entrepreneurial activities through accumulated savings (Sanyal, 2009).

3. Savings Goals for Personal Hobbies

Savings for personal hobbies, though less explored, represents a growing area of interest in financial behavior research. Literature indicates that:

- Non-essential savings motivations play a significant role in overall financial satisfaction and well-being (Shefrin & Thaler, 1988).

- Psychological benefits of hobby savings, such as stress reduction and self-fulfillment, can reinforce disciplined savings behavior (Kasser & Ryan, 1996).

- Community and social influence affect hobby-related savings, with beneficiaries often motivated by peer practices and cultural norms (Karlan et al., 2010).

- Design of welfare schemes can indirectly support savings for hobbies if financial literacy andiscretionary income are enhanced (Banerjee et al., 2015).

4. The Ladki Bahin Scheme and Its Impact

The Ladki Bahin Scheme, aimed at empowering women in Nagpur City, provides financial assistance with potential implications for beneficiaries' savings patterns. Initial observations suggest that the scheme:

- Boosts disposable income, allowing beneficiaries to allocate funds towards both essential needs and personal interests.

- Encourages savings for self-development, with a portion of benefits reportedly directed towards skill-building and hobbies.

- Promotes a savings culture, particularly among women, through conditional cash transfers and financial literacy initiatives.

- Influences consumer behavior, potentially increasing expenditure on non-essential goods, including hobbies, due to enhanced financial security.

Research Methodology

- **Research Design:** Descriptive research design using

A survey approaches.

- **Sample Size**: 200 beneficiaries of the Ladki Bahin Scheme in urban Nagpur City.
- **Sampling Technique:** Simple random sampling**.**
- **Data Collection:** Structured questionnaires and interviews.
- **Data Analysis:** Descriptive statistics and hypothesis testing using chi-square tests.

Session on how to use the money collected under Ladki Bahin Scheme

Limitations

1.Geographical Limitations: The study is confined to urban areas of Nagpur City, which may limit the generalizability of the findings to rural or other regions.

2.Sample Size: With a sample size of 200 beneficiaries, the study's results may not fully represent the entire population of the Ladki Bahin Scheme recipients.

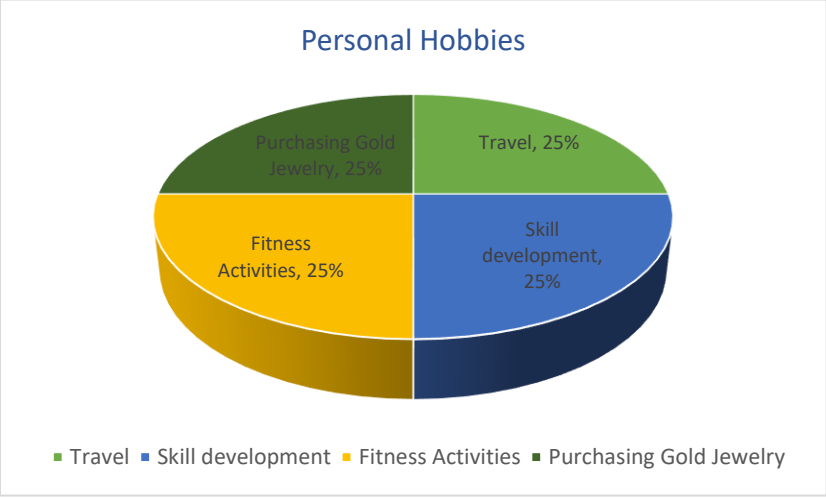
3.Self-Reported Data: The reliance on self-reported data introduces the possibility of response bias, affecting the accuracy of the findings.

4.Limited Variables: The study focuses primarily on savings goals for personal hobbies, potentially overlooking other significant factors influencing financial behavior.

Here are questions that could be part of a questionnaire for the study:

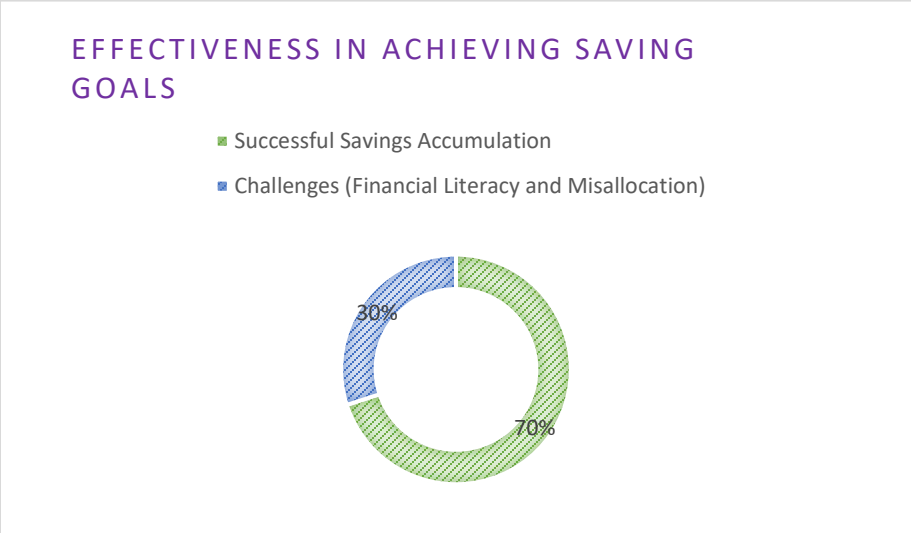
1. What are the most common personal hobbies for which beneficiaries save under the scheme?

Personal Hobbies	Percentage
Travel	25%
Skill Development	25%
Fitness Activities	25%
Purchasing Gold Jewelry	25%
Total	100%



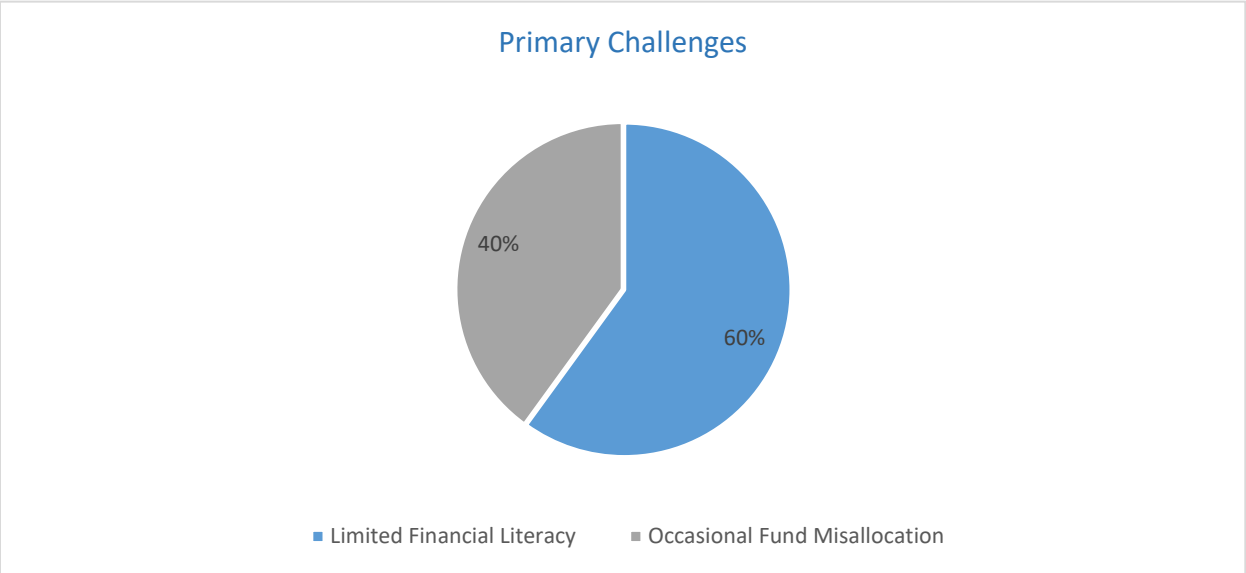
2.How effectively does the Ladki Bahin Scheme help in achieving these savings goals?

Effectiveness	In (%)
Successful Savings Accumulation	70%
Challenges (Financial Literacy and Misallocation)	30%



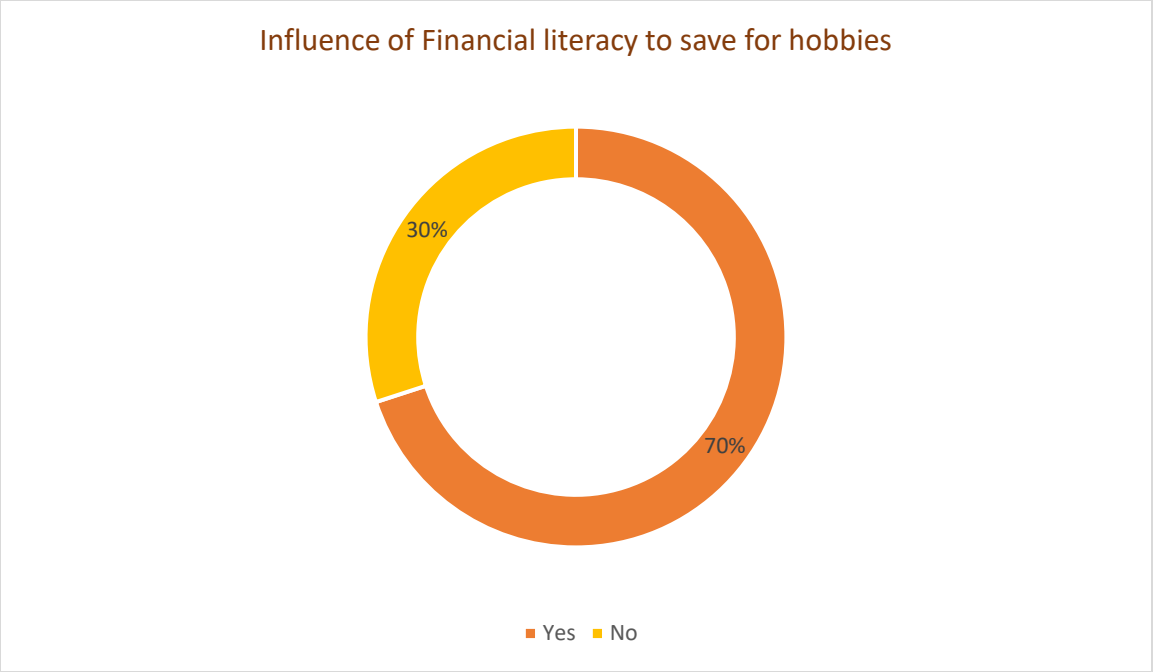
3. What are the primary challenges faced by beneficiaries in saving for personal hobbies?

Limited Financial Literacy	60%
Occasional Fund Misallocation	40%



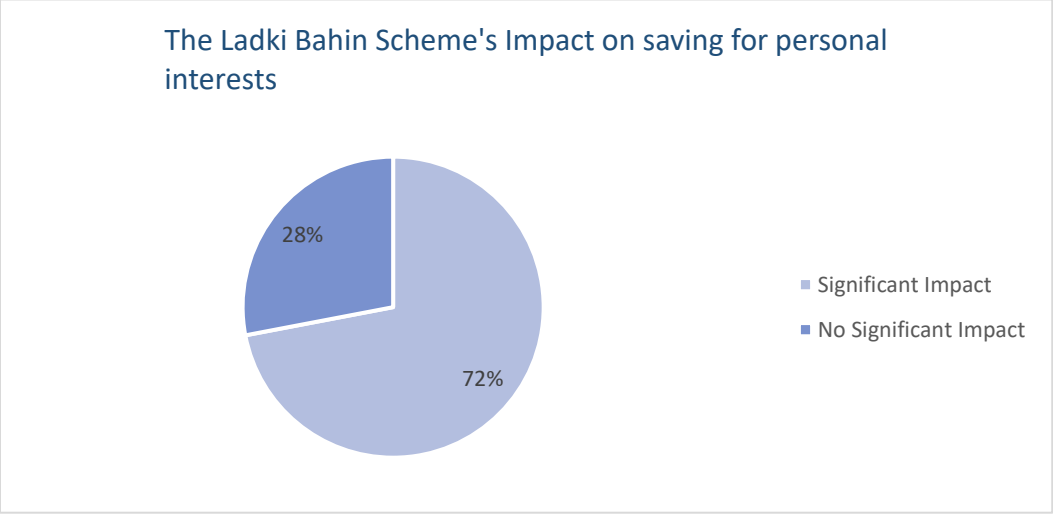
4. Does financial literacy influence the ability to save for hobbies?

Yes	70%
No	30%



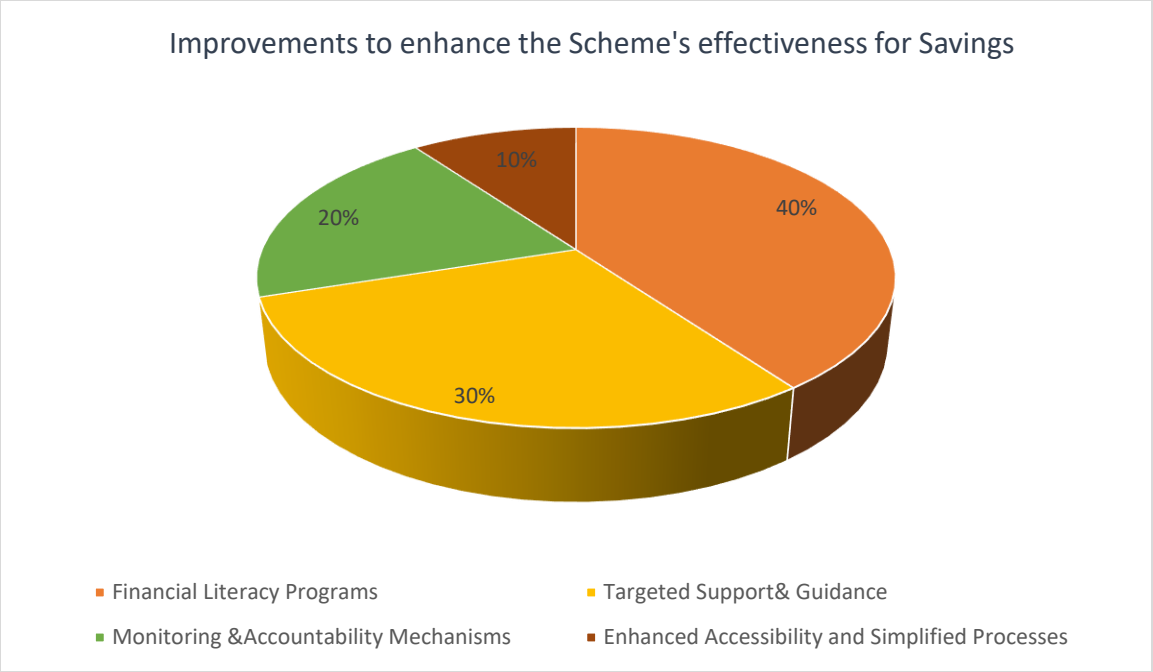
5. How does the duration of participation in the scheme impact savings for personal interests?

Significant Impact	No Significant Impact
72%	28%



6. What improvements can be made to enhance the scheme's effectiveness for savings?

Improvements	**In Percentage**
Financial Literacy Programs	40%
Targeted Support and Guidance	30%
Monitoring and Accountability Mechanisms	20%
Enhanced Accessibility and Simplified Processes	10%
Total	**100%**



Future Research Directions

1. Replication and Generalizability: Future studies could replicate this research in different urban regions to validate the findings and assess the scheme's effectiveness across diverse socio-economic backgrounds.

2. Longitudinal Study: Conducting a longitudinal analysis would help examine the long-term impact of the Ladki Bahin Scheme on savings behavior and the sustainability of financial independence among beneficiaries.

3. In-depth Interviews: Qualitative insights through in-depth interviews with beneficiaries can uncover nuanced perspectives on challenges faced, motivational factors, and personalized experiences with the scheme.

4. Comparison with Other Schemes: A comparative analysis of the Ladki Bahin Scheme with similar financial initiatives could highlight best practices and areas for improvement, offering a comprehensive understanding of its relative effectiveness.

Recommendations for Policymakers:

1. Enhanced Financial Literacy Programs: Implement targeted financial education initiatives to improve beneficiaries' understanding of budgeting, investment options, and disciplined savings, ensuring more effective use of the scheme's benefits.

2. Customized Savings Plans: Introduce flexible savings plans aligned with beneficiaries' diverse aspirations, such as travel, skill development, and asset acquisition, to enhance engagement and goal attainment.

3. Monitoring and Support Systems: Establish regular monitoring and advisory support to prevent fund misallocation and provide personalized guidance to beneficiaries in achieving their savings goals.

4. Incentives for Goal Achievement: Offer financial incentives or rewards for beneficiaries who consistently meet their savings targets, encouraging sustained participation and motivation.

5. Collaboration with Financial Institutions: Partner with local banks and microfinance institutions to facilitate accessible savings accounts, loans, and advisory services, expanding financial inclusion and support for urban women.
